

About this project

This project provides access to the system **LatexMk** initialization (configuration) file used by Overleaf. **LatexMk** is a Perl script which may vary slightly according to the T_EX Live version and compiler chosen for the project. If you need to be 100% certain which **LatexMk** is being used, add code from this project to your project and compile to typeset a listing of **LatexMk** and make it available for download as one of the output files.
